# Organic & Biodynamic Wines

This section has been created to give more importance to wines not produced from conventional agriculture explaining the meaning and the difference between organic and biodynamic wines.

 Organic wines: These are wines made from organically grown grapes where natural methods are used for controlling insects, disease and weeds in the vineyards. No herbicides, pesticides or chemical fertilisers are used and only approved, natural substances are applied in the vineyards and winery. The use of sulphur dioxide as a preservative is dramatically lowered versus conventionally made wines.

 Biodynamic wines: The ultimate state of farming with nature. This approach views the farm as a single organism rather than different components and interference can affect the natural 'rhythm' of the farm. Planting, pruning and harvesting is in accordance with a biodynamic calendar.
